[Our Parent Company](#)

Innovative equipment and machinery made of stainless steel for municipal and industrial water and wastewater treatment

Competence in stainless steel - Leading in WWT

Huber Technology provides state-of-the-art equipment for municipal and industrial water and wastewater treatment. Our main focus is liquid/solid separation in general and headworks equipment in particular. We offer a comprehensive line of stainless steel equipment.

The HUBER Group is successfully operating in the environmental engineering sector. With its more than 60 subsidiaries, representative offices and agents, the HUBER Group is among the worldwide leading suppliers in the field of wastewater/sludge treatment and process engineering. With more than 175 years of commitment to drinking water and wastewater treatment, HUBER has always been an innovator in this field with a continuous focus on the development of new solutions to conserve one of our most valuable resources: water.

HUBER invented and introduced the famous ROTAMAT® products and STEP SCREEN®s. With over 50,000 installations we have unmatched experience and expertise.

HUBER have now achieved the Organizational Carbon Footprint Standard ISO 14064 and will continue to strive to reduce our impact on the environment. We are continually looking for new innovation to make the world a better place for everyone.

Huber Technology UK is the British member of the HUBER group. Our parent company, the HUBER SE, is located in the German State Bavaria.

The HUBER production plant and main office in Germany

The company has been family-owned for over 175 years. With its more than 60 subsidiaries, offices and representatives worldwide, the successful family-owned environmental technology company is one of the leading enterprises in wastewater/sludge treatment and process engineering. HUBER has developed into a state-of-the-art manufacturer of equipment and a solution supplier for all wastewater, production water and drinking water applications. The HUBER group with a total of over 1,300 employees worldwide makes an annual turnover of more than 200 Mio. Euro / 170 Mio. GBP.

The headquarters and factory have been located in Berching for over 175 years. Berching is about 80 miles North of Munich, the small town is surrounded by the beautiful natural forest of the Altmühl Valley and is connected through the Rhein-Main-Donau Canal to both the North Sea and the Black Sea. Berching looks back to a history of over 1,100 years; it is still enclosed by its medieval town wall and gate towers.

For more than 175 years the company has been innovative on the potable and wastewater treatment sector and developing new solutions for preservation of the most valuable resource – our water.

The products have grown in the long tradition of the HUBER company and have been developed in cooperation with the customer and for the customer. Over decades a complete program of equipment for buildings related to water treatment was created. The fundamental assumption was to offer equipment with the same life span as the concrete buildings to which it was added. This assumption precluded all materials but stainless steel. In close interaction with the decisive authorities, contractors and operating parties, a complete program was created which takes into consideration the very particular requirements of all different fields of application for water - considering also the local conditions in the different regions of the world.
